

DESCRIPTION

The quality of the Ezee Lock far outweighs all that came before it, and the improved difference is evident in more than one way. There is a big improvement in the handling, weather proofing and secure-shut ability of this locking system.

CHARACTERISTICS

The Ezee Lock grants you an effortless push, as well as pull movement, as the adjusted system allows for much less friction than others before it. A one-hand action is all that's needed in order to operate this lock effectively.

SECURITY

When you close your frameless glass system with the Ezee Lock, a tight compression of the panels is set in motion. It provides an even more effective seal, not only at the opening panel, but throughout the entire system. The compressed sealing adds tremendously to the overall security and weather proofing of the Paragon system, placing it in a different class altogether.

UNIQUE FEATURES

Being the first and surely the most functional locking system of its kind in South Africa, the Ezee Lock becomes a must-have for any Paragon System.

RETROFIT OR UPGRADE OPTIONS ARE AVAILABLE FOR EXISTING PARAGON SYSTEMS
